

## Runways Datasheets

Where specific lines of lift are required and overhead travelling cranes would be too restrictive for multi use operations, then a combination of runway beams, underslung cranes and switch points are probably the best solution.

Radio control in place of pendant control gives the operator flexibility. It also helps prevent damage to collectors and switch points.

Crane Care offer the following service

- Discussion of design options with customer
- Design of support steelwork and runway beams in line with BS2853
- Supply of special switch points and latch mechanisms as an integral part of the system
- Turnkey project from concept to commissioning.
