

## Special Handling Beam Datasheet

Many lifting equipment problems can be overcome using correctly designed lifting and spreader beams.

Fitted with quality grade 80 chains and/or wire rope and nylon slings.

Alloy shackles which are predominantly used for connection to the load.

- Manufactured to lift uneven loads
- Fabricated to support long flexible loads
- Simple spreader beams to prevent crushing delicate loads
- To enhance lift height where required
- Manually or electrically adjustable
- All designs conform to relevant standards
